

AMENDMENT TO THE CLAIMS

Claims 1-17 (Cancelled).

CI b1
18. (Previously Added) A pull-out guide fitting for a drawer, comprising:
a drawer track to be attached to a drawer;
a support track to be attached to a body sidewall;
a center track arranged between said drawer track and said support track;
rolling elements arranged between said drawer track and said center track, and
arranged between said center track and said support track for allowing a transfer of the
drawer between an open position and a closed position; and
a damping device operable to dampen a relative motion between at least two of said
drawer track, said support track, and said center track, said damping device including at
least two components operable to move relative to each other.

19. (Previously Added) The pull-out guide fitting of claim 18, wherein said
damping device comprises a hydraulic damping device.

20. (Previously Added) The pull-out guide fitting of claim 18, wherein said
damping device comprises a linear damping component including a cylinder and a piston
arranged within said cylinder so as to be linearly movable within said cylinder.

21. (Previously Added) The pull-out guide fitting of claim 18, wherein said
damping device comprises a rotary damper component.

DI
Copy 22. (Previously Added) The pull-out guide fitting of claim 18, wherein said damping device is operable to dampen a relative motion between said drawer track and said support track.

C1
Copy 23. (Previously Added) The pull-out guide fitting of claim 22, further comprising a stop on said support track, said damping device being mounted on said drawer track so as to be operable to engage said stop.

24. (Previously Added) The pull-out guide fitting of claim 18, wherein said damping device is operable to dampen a relative motion between said drawer track and said center track.

25. (Previously Added) The pull-out guide fitting of claim 24, further comprising a stop on said center track, said damping device being mounted on said drawer track so as to be operable to engage said stop.

26. (Previously Added) The pull-out guide fitting of claim 18, wherein said damping device is operable to dampen a relative motion between said center track and said support track.

27. (Previously Added) The pull-out guide fitting of claim 26, further comprising a stop on said center track, said damping device being mounted on said support track so as to be operable to engage said stop.

28. (Previously Added) The pull-out guide fitting of claim 18, wherein said damping device is operable to dampen a relative motion between said center track and said

DI
Con't
support track, and also to dampen a relative motion between said drawer track and said center track.

29. (Previously Added) The pull-out guide fitting of claim 28, further comprising a first stop on said drawer track and a second stop on said support track, said damping device being mounted on said center track so as to be operable to engage said first stop and said second stop.

30. (Previously Added) The pull-out guide fitting of claim 28, wherein said at least two components of said damping device comprise:

a pair of racks each having a toothed rack profile; and
a pinion for engaging said pair of racks.

31. (Previously Added) The pull-out guide fitting of claim 18, further comprising a stop formed of plate material and mounted on at least one of said drawer track, said center track, and said support track so as to extend radially therefrom.

32. (Previously Added) The pull-out guide fitting of claim 18, further comprising a coupling attachment for coupling said drawer track and said center track, said damping device being arranged so as to be operable to dampen a relative motion either between said drawer track and said support track or between said center track and said support track.

33. (Previously Added) The pull-out guide fitting of claim 32, further comprising a control component for controlling a relative movement between said drawer track, said center track, and said support track, said control component being operable to control the relative movement only over a portion of a path of movement of the drawer.

Don't
34. (Previously Added) The pull-out guide fitting of claim 18, further comprising a control component for controlling a relative movement between said drawer track, said center track, and said support track.

C1
Don't
35. (Previously Added) The pull-out guide fitting of claim 18, wherein said at least two components of said damping device comprise:
a rack having a toothed rack profile; and
a pinion for engaging said rack.

36. (Previously Added) The pull-out guide fitting of claim 35, further comprising a stop on one of said drawer track, said center track, and said support track, said damping device being arranged such that an end of said rack engages said stop when the drawer is partially closed.

37. (Previously Added) The pull-out guide fitting of claim 36, further comprising a compression spring arranged to bias said rack of said damping device toward said stop.

38. (New) The pull-out guide fitting of claim 18, wherein said damping device comprises a fluid damping device including a damping fluid medium.

39. (New) The pull-out guide fitting of claim 38, wherein said damping fluid medium of said fluid damping device comprises a gas.

40. (New) The pull-out guide fitting of claim 38, wherein said damping fluid medium of said fluid damping device comprises air.
